

Mars Sample Return Campaign

Programmatic Environmental Impact Statement

NASA Public Meetings

NASA invites you to attend public meetings for the Mars Sample Return Campaign Draft Programmatic Environmental Impact Statement (PEIS).

NASA, in coordination with the European Space Agency, proposes to conduct a campaign to retrieve samples from Mars (i.e., Martian rocks, regolith, and atmosphere) and transport them to Earth. The proposed sample landing location is the Utah Test and Training Range, with additional activities potentially occurring on Dugway Proving Ground. The Draft PEIS provides information and analysis related to the potential environmental impacts associated with this proposed action. NASA will hold four public meetings to solicit comments regarding the analysis and content in the Draft PEIS.

For additional information, to download an electronic copy of the Draft PEIS, and for ways to submit comments, scan the QR code.
